Abstract 81

Data originally presented at the 2023 American Society of Clinical Oncology Annual Meeting; June 2-6, 2023; Chicago, IL, USA. Abstract 7545.

Speaker Disclosures

Pier Luigi Zinzani had a consulting or advisory role with Celltrion, Gilead Sciences, Janssen-Cilag, Bristol Myers Squibb, SERVIER, Sandoz, MSD, AstraZeneca, Roche, EUSA Pharma, Kyowa Kirin, Takeda, Secura Bio, TG Therapeutics, Novartis, ADC Therapeutics, Incyte, BeiGene; and speakers bureau with Celltrion, Gilead Sciences, Janssen-Cilag, Bristol Myers Squibb, SERVIER, MSD, AstraZeneca, Takeda, EUSA Pharma, Roche, Kyowa Kirin, Novartis, Incyte, BeiGene.

Zinzani PL, et al. Zanubrutinib plus obinutuzumab vs obinutuzumab in patients with relapsed/refractory follicular lymphoma: Updated analysis of the ROSEWOOD study.
Presented at: 17th International Conference on Malignant Lymphoma; June 13-17, 2023; Lugano, Switzerland. Abstract 81. Correspondence: Pier Luigi Zinzani, MD, PhD; pierluigi.zinzani@unibo.it

Background

- In a phase 1b/2 study that included patients with R/R FL, the combination of zanubrutinib[a] + obinutuzumab was generally well tolerated, with an ORR of 72% and a complete response rate of 39%[1]
- The ROSEWOOD trial (BGB-3111-212; NCT03332017) examined zanubrutinib + obinutuzumab vs obinutuzumab in patients with R/R FL who received ≥2 prior lines of therapy
- At the primary analysis, the trial met its primary endpoint of ORR[2]
  - Zanubrutinib + obinutuzumab, 68.3%
  - Obinutuzumab, 45.8%

} *P*=.0017

Here we report an updated analysis of the ROSEWOOD trial with a median follow-up of 20.2 months

FL, follicular lymphoma; ORR, objective response rate; R/R, relapsed or refractory.

[a] Zanubrutinib monotherapy is approved in the US and EU for the treatment of adult patients with chronic lymphocytic leukemia; marginal zone lymphoma after ≥1 prior anti-CD20–based therapy; Waldenström macroglobulinemia (in EU: after ≥1 prior therapy, or as first-line treatment if unsuitable for chemoimmunotherapy); and mantle cell lymphoma after ≥1 prior therapy (US only).

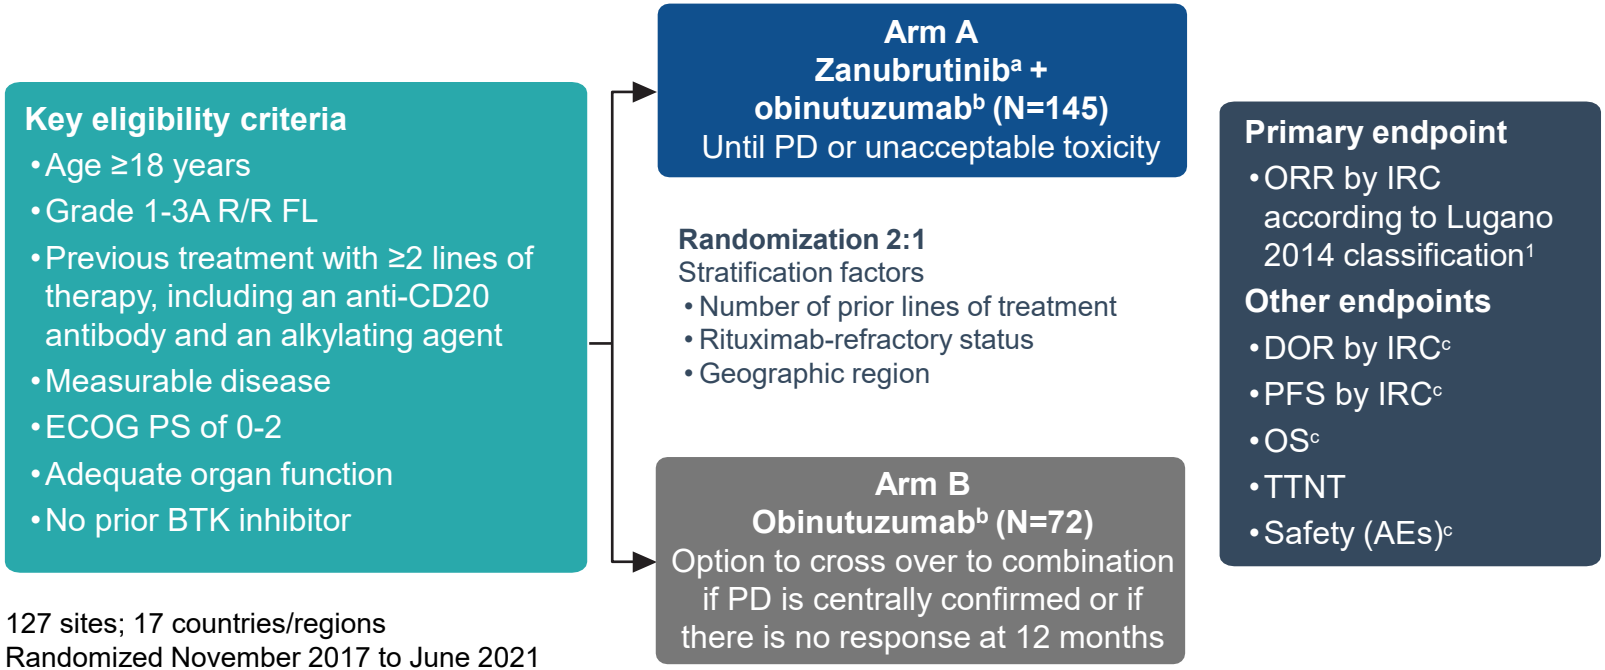
ROSEWOOD study design



127 sites; 17 countries/regions
Randomized November 2017 to June 2021

AE, adverse event; BTK, Bruton tyrosine kinase; DOR, duration of response; ECOG PS, Eastern Cooperative Oncology Group performance status; FL, follicular lymphoma; IRC, independent review committee; ORR, objective response rate; OS, overall survival; PD, progressive disease; PFS, progression-free survival; R/R, relapsed or refractory; TTNT, time to next treatment.

[a] Zanubrutinib was given orally at 160 mg twice daily. [b] Obinutuzumab was given intravenously at 1000 mg in both arms on days 1, 8, and 15 of cycle 1, day 1 of cycles 2-6, and then every 8 weeks up to a maximum of 20 doses. [c] Secondary endpoint.

The study population was heavily pretreated and had refractory disease

Characteristics	Zanubrutinib + obinutuzumab (n=145)	Obinutuzumab (n=72)
Age, median (range), years	63.0 (31-84)	65.5 (32-88)
ECOG PS of ≥1, n (%)	59 (40.6)	41 (57.0)
FLIPI score of ≥3, n (%)	77 (53.1)	37 (51.4)
Ann Arbor stage III-IV, n (%)	119 (82.1)	60 (83.3)
Bulky disease (≥7 cm), n (%)	23 (15.9)	12 (16.7)
High LDH level (>ULN), n (%)	49 (33.8)	29 (40.3)
High tumor burden per GELF criteria, n (%)	83 (57.2)	40 (55.6)
No. of prior lines of therapy, median (range)	3 (2-11)	3 (2-9)
Refractory to rituximab, n (%)	78 (53.8)	36 (50.0)
Refractory to most recent line of therapy, n (%)	47 (32.4)	29 (40.3)
PD ≤24 months after starting first line of therapy, n (%)	50 (34.5)	30 (41.7)
Prior therapy, n (%)		
Chemoimmunotherapy	143 (98.6)	71 (98.6)
Anthracyclines	118 (81.4)	57 (79.2)
Cyclophosphamide	136 (93.8)	68 (94.4)
Bendamustine	79 (54.5)	40 (55.6)

ECOG PS, Eastern Cooperative Oncology Group performance status; FLIPI, Follicular Lymphoma International Prognostic Index; GELF, Groupe d'Etude des Lymphomes Folliculaires; LDH, lactate dehydrogenase; PD, progressive disease; ULN, upper limit of normal.

Zinzani PL, et al. Zanubrutinib plus obinutuzumab versus obinutuzumab in patients with relapsed/refractory follicular lymphoma: Updated analysis of the ROSEWOOD study.
Presented at: 17th International Conference on Malignant Lymphoma; June 13-17, 2023; Lugano, Switzerland. Abstract 81. Correspondence: Pier Luigi Zinzani, MD, PhD; pierluigi.zinzani@unibo.it

Median treatment exposure for zanubrutinib + obinutuzumab was twice that for obinutuzumab alone

Zanubrutinib + obinutuzumab

- Median zanubrutinib exposure was 12.2 months (range, 0.5-44.1 months)
  - 56.7% of patients received ≥12 cycles
  - Median relative dose intensity was 98.9% (range, 30.7%-100%)
  - Median number of obinutuzumab infusions was 11 (range, 3-20)

Obinutuzumab

- Median exposure was 6.5 months (range, 0.1-28.7 months)
  - Median number of infusions was 9 (range, 3-20)

Conclusions

- In the ROSEWOOD study, zanubrutinib + obinutuzumab demonstrated meaningful efficacy and a manageable safety profile in heavily pretreated patients with R/R FL
- This longer follow-up analysis provides evidence of the significant complete response rate, with longer PFS and TTNT, with zanubrutinib + obinutuzumab vs obinutuzumab alone
  - A consistent benefit was observed across key prespecified subgroups
- Zanubrutinib + obinutuzumab demonstrated a favorable risk-benefit profile and may represent a potential novel combination therapy for patients with R/R FL
- A phase 3 study of zanubrutinib + obinutuzumab in patients who previously received ≥1 line of systemic therapy is now underway (MAHOGANY; NCT05100862)

FL, follicular lymphoma; PFS, progression-free survival; R/R, relapsed or refractory; TTNT, time to next treatment.
